EDUCATION

Bachelor of Engineering, *Specializing in Software Engineering – Big Data*

2022 - 2027

York University - Academic Excellence Scholarship (95%+)

- Machine Learning, Artificial Intelligence, Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, Database Systems, Software Design, Computer Organization, Software Tools, Electricity

WORK EXPERIENCE

Business Systems Analyst:

January 2026 – August 2026

CIBC (Canadian Imperial Bank of Commerce)

- Supported E2E migration of legacy **ServiceNow** configurations to Out of Box (OOB), analyzing and validating **CMDB** (Configuration Management Database) data across **millions of records** to determine migration scope and applicable filters.
- Automated manual data validation/processing tasks, **reducing** manual effort **by 5 hours** a week.
- Analyzed ServiceNow **workflows**, **business rules** and CMDB **relationships** within ServiceNow to align with OOB configuration standards.
- Collaborated with cross functional **stakeholders** to define data migration criteria, gathering requirements and resolving conflicting priorities across business and technical teams.
- Supported **UAT** and **testing** cycles for the ServiceNow migration, identifying and documenting data discrepancies prior to production cutover.

Web Developer:

May 2025 – January 2026

Royal Canadian Realty

- Developed and deployed a responsive **landing page**, improving lead generation and online presence by **23%**.
- Used **HTML/CSS**, **JavaScript**, and **React** to build an engaging design showcasing listings and contact features.
- Collaborated directly with stakeholders to tailor branding, content, and layout for client needs.

TECHNICAL SKILLS

Programming Languages: Java, Python, C, C++, C#, HTML/CSS, MATLAB, JavaScript, SQL, RISC-V, Verilog, Event-B

Tools & Frameworks: Git, React, Spring Boot, AWS, Agile, CMD, Maven, DevOps, Quartus, Microsoft Suite, Google Workspace

PROJECTS

Deximon – Full Stack Social Platform:

- Built a full stack social web platform for Pokémon TCG collectors, using **Next.js**, **FastAPI**, and **PostgreSQL** (SQLAlchemy/Alembic), covering user authentication, a card marketplace, and collection management.
- Owned the backend end to end, designing card CRUD operations, a binder system, rearrangement logic, while handling both manual and scanner confirmed card additions with **ownership validation** to prevent data conflicts.

Restaurant Reviewer App:

- Led a team** to design an end-to-end application using Java, projected to **increase** restaurant visibility **by 45%**.
- Developed and implemented an optimized SQL database architecture with **38% faster response times**.

YorkU Parking System:

- Built a parking management system in Java with a JavaFX UI, managing **500+ simulated parking spots**.
- Developed user and role management with parking validation, rate differentiation, and **sensor-based** tracking.

YorkU AI Chatbot – Virtual Campus Assistant:

- Designed and deployed an intuitive web interface using **Python** and OpenAI's GPT **API**, showcasing practical experience integrating large language models (LLM) into production style applications.
- Embedded **prompt engineering** to guide AI responses and maintain relevance to YorkU services and terminology.
- Achieved high accuracy in responding to queries by students, demonstrating practical **AI integration** and usability.

Other Notable Work:

- Autonomous Vehicle, Space Invaders Game, Pokémon Turn Based Game, Voice Activated Fire Safety System, Self Watering Plant System, FPGA Hangman
